GEDO REC

FOR TRACK DOCUMENTATION

The Trimble GEDO CE system is a fast, efficient tool to measure, record and document detailed information about existing track. With Trimble GEDO CE, you can quickly survey existing lines without the need for alignment data. In a single operation the Trimble GEDO CE captures the 3D coordinate position of the track, together with gauge and cant. The information can be used for GIS, redesign and quality control.

THE TRIMBLE GEDO CE SYSTEM

Trimble GEDO CE is a suite of tools for measurement, recording, analysis and applications for railway track location, construction and maintenance. Specially tailored for railway tasks and processes, Trimble GEDO CE hardware and software streamlines work in the field and office. The system uses standard techniques and data formats to share information with leading applications for railway track design and maintenance.

TOOLS FOR TRACK DOCUMENTATION

Trimble GEDO CE Trolley

A single operator can quickly and safely capture information to document existing track. Positioning is supplied by Trimble GNSS Receivers or Trimble S-Series Total Stations. The trolley is easily removed to stay clear of railway operations.

Trimble GEDO Office

Software for processing and analysis of field data, and for data exchange with external systems.

Trimble GEDO Rec

Field software optimized for track documentation and measurement. Trimble GEDO Rec runs on the Trimble TSC3 Controller.

Trimble Profiler GEDO CE 2.0

Laser measurement unit to measure object close to the track, As-Built survey, platform gauging and clearance check. The measurement can be taken relative according to the track position or by using total station or GNSS absolute coordinates can be measured additionally.
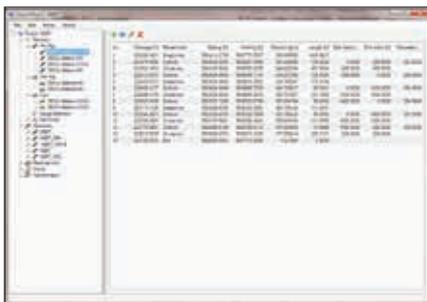

Key Benefits:

- ▶ Simple, self-contained trolley captures track position, gauge and cant in a single operation
- ▶ Measure long portions of track without disruption to normal rail traffic
- ▶ Optical or GNSS positioning ensures confidence in location and track conditions
- ▶ Fast operation reduces costs and crew size. Capture detailed information on up to 3,000 meters of track in one hour using GNSS, and more than 1,000 meters per hour with total stations
- ▶ Optimize field work by merging results from multiple surveys
- ▶ Export results to GIS and rail design software, and compare existing conditions to design alignment
