New Wingtra-Trimble partnership brings seamless data integration for KOREC drone customers

KOREC is delighted to announce that a new partnership between Wingtra and Trimble will deliver tighter integration between Wingtra's industry-leading drone solutions and Trimble's world-class survey and mapping workflows.

Delivering a smarter way to get high-quality data, the joining of these powerful Trimble and Wingtra survey tools will cut field time, minimise manual work and ensure users achieve accurate, actionable results far faster.

Available now is Trimble-native file support in WingtraCLOUD enabling quick drag-and-drop compatibility. This will enable KOREC customers to create survey sites instantly by uploading Trimble Business Center export files in .JXL (no manual setup), Skip RINEX conversions (just drag and drop your TO2/TO4 files) and work faster in local coordinate systems with fewer errors

Coming in 2026 is Wingtra's cm-level positioning powered by Trimble correction services with no need for a base station. Users will be able to automatically apply cm-accurate corrections in WingtraCLOUD and establish known points globally with PPP support. Plus users will also have the ability to sync and export maps directly from WingtraCLOUD to Trimble Connect and TBC.

Future data connectivity will be ongoing throughout 2026 with tighter Trimble + Wingtra hardware/software integrations ensuring data flows from flight to final deliverable, without interruptions.

John Cartlege, Mapping & GIS Business Area Manager, KOREC said:

“Trimble leads in precision positioning, data integration and advanced GNSS solutions, Wingtra drives innovation in aerial mapping with its WingtraRAY VTOL drone technology and KOREC champions emerging technologies, bringing these

innovations to our UK and Irish customers through our local expertise, support, and consultancy.

“We look forward to doing what we do best - helping KOREC customers seamlessly integrate these solutions into their workflows for greater efficiency accuracy and value.”
